

plant

An organism that has roots, a stem, leaves and often flowers.

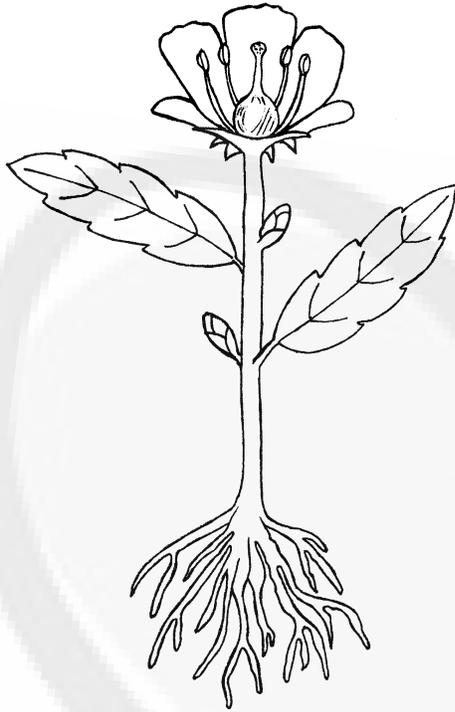

plant

root

The downward growing part of a plant. It provides support and takes in water and nutrients from the soil.

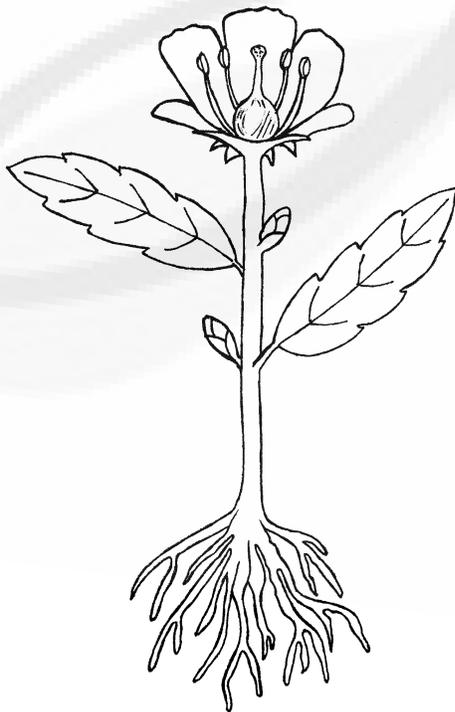

root

stem

This part of a plant often grows upward, provides support, and contains channels to transport water and nutrients to the various parts of the plant.

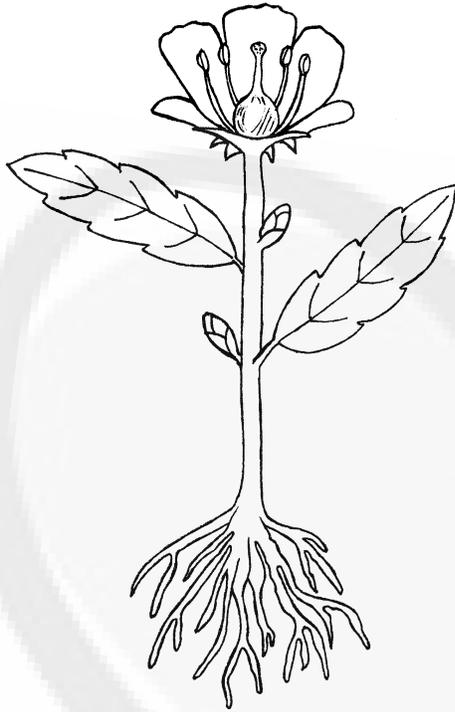

stem

leaves

These thin, flat blades which generally grow from the stem contain veins that carry nutrients and provide support. They are usually green.

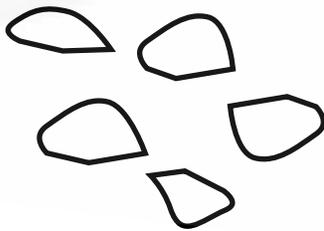

leaves

flower

This part of the plant is made up of different types of modified leaves. It is often very colorful. It contains the male and female parts of the plant.

flower

seeds

These are the part of a plant that can grow into new plants. These can be spread by wind, water and animals.
