

TABLE OF CONTENTS

HOW THIS MANUAL CAN BE USED	1
THE IMPORTANCE OF COSMIC EDUCATION AND THE FIVE GREAT LESSONS	5
MATTER	8
Introduction	8
Atoms	9
Background Information	9
Activity 1: Exploring Atomic Structure	13
Activity 2: Demonstrating That Atoms Are the Basic Units of Matter	15
Activity 3: Drawing Atomic Structures	17
Molecules	19
Background Information	19
Activity 1: Witnessing Molecules in Motion	21
Chemical Elements	24
Background Information	24
Activity 1: Researching Some Common Elements	27
Activity 2: Becoming Familiar with Chemical Symbols	29
The States of Matter	31
Background Information	31
Activity 1: Acting Out Energy Levels of Molecules	36
Activity 2: Exploring the Basic Physical Properties of Solids	38
Activity 3: Exploring the Basic Physical Properties of Liquids	41
Activity 4: Exploring the Basic Physical Properties of Gases	44
Activity 5: Investigating Plasma	47
Experiment 1: Weighing Air	49
Activity 6: Measuring the Volume of an Irregular Solid	51

Water Pressure and Air Pressure	53
Background Information	53
Activity 1: Demonstrating That Water Pressure Increases with Depth	56
Activity 2: Seeing the Effects of Air Pressure	58
Activity 3: Using Water Pressure to Move Objects	60
Activity 4: Using Air Pressure to Move Objects	62
Changes in Matter	64
Background Information	64
Activity 1: Investigating Physical Change in Solids and Liquids	66
Activity 2: Investigating Physical Change in a Gas	69
Activity 3: Causing a Chemical Change	71
Combinations of Matter	74
Background Information	74
Activity 1: Creating a Mixture	77
Activity 2: Investigating How Elements Combine to Make Compounds . . .	80
Activity 3: Recognizing Chemical Formulas	83
Activity 4: Researching Familiar Elements and Compounds	85
Acids and Bases	88
Background Information	88
Activity 1: Investigating Acids and Bases	90
Density	93
Background Information	93
Activity 1: Testing Density in Water	95
Fire and Combustion	98
Background Information	98
Activity 1: Investigating What Is Needed for Combustion	100
 ENERGY	 103
Introduction	103
Energy Sources	103
Background Information	103
Activity 1: Transforming Energy	111
Activity 2: Investigating How Fossil Fuels Form	115
Activity 3: Exploring How Electricity is Generated at Power Plants	117
Activity 4: Conserving Energy and Natural Resources	121

Sound	124
Background Information	124
Activity 1: Demonstrating That Sound Travels Through Air	128
Activity 2: Demonstrating That Sound Travels Through Solids	132
Activity 3: Demonstrating That Sound Travels Through Water	134
Light	136
Background Information	136
Activity 1: Discovering That Light Travels in a Straight Line	140
Activity 2: Investigating Opaque, Translucent, and Transparent Objects	143
Activity 3: Measuring Absorbed Light	145
Activity 4: Investigating Reflected Light	148
Activity 5: Exploring How Mirrors Reverse Images	152
Activity 6: Exploring the Refraction of Light	155
Electricity and Magnetism	158
Background Information	158
Activity 1: Exploring How Magnets and Batteries Work	168
Activity 2: Building an Electric Circuit	171
Activity 3: Investigating Electric Current	173
Activity 4: Exploring Electromagnetic Fields	177
Activity 5: Building an Electromagnet	180
Activity 6: Making a Model of How Electrical Energy Is Transmitted and Distributed	182
Activity 7: Investigating the Electromagnetic Spectrum	185
Gravity, Friction, and Inertia	188
Background Information	188
Activity 1: Measuring the Mass and Weight of an Object	194
Activity 2: Investigating Inertia and Momentum	199
Activity 3: Using Gravity and Friction to Make Objects Stop	204
Activity 4: Investigating Actions and Reactions	208
Activity 5: Exploring Causes of a Change in Motion	210
Activity 6: Investigating Relative Motion	213
